

V-GROOVE BLADE

The new V-Grove routing blade is the perfect solution to time saving, on-site routing.

Staff can now route and fold a range of Multipanel composites on-site without the need to return the material to the workshop for CNC routing.

The blade fits into almost any circular saw making it completely portable.

The ability to fabricate panels on site offers significant time and cost savings.

100% PORTABLE!

Specification:

Size: 170mm Diameter

Blade: 4mm

Tips: Carbide

Angle: 90 Degrees

Bore: 16mm, 30mm

Teeth: 18

Speed: 11,000rpm

Used for straight V-Grooving a range of Multipanel UK products.

It is recommended that a minimum of 0.30mm Polyethylene should be left to ensure suitable strength and performance.

90° folding on-site to produce boxes and trays quickly and cost-effectively.

GENERAL SAFETY

- Before operating saw blade you must read and retain safety warnings.
- Incorrect use may cause serious or fatal injury.

MACHINE SAFETY

- Isolate machine at power source before inspecting or changing saw blade.
- Read machine manufacturer's instructions before installing or using saw blade.
- Machine guards and safety features must be functional and according to regulations.
- Machine specifications, speed and cutting direction must be correct and fit-for-purpose for saw blade.

CUTTING TOOL SAFETY

- Caution must be used when unpacking and transporting sharp edged tools.
- Inspect for damage. Damaged, cracked or fractured saw blades must not be used.
- Saw blade must be correct type for material

being cut.

- Installation of cutting tool must be by trained and qualified personnel.

PERSONAL SAFETY

- Before using this cutting tool/saw blade, always assess your entire task for personal safety and the safety of others. Only proceed with task if it can be done safely.
- Use personal safety protection. Respiration protection may be required when sawing some materials.
